

FAASTeam presents:

Avoiding Loss of Control

Did you know that loss of aircraft control is the number one cause of fatal GA accidents each year? Loss of Control (LOC) can happen anywhere and at any time, in any phase of flight, and may quickly develop into a stall or spin. There is one fatal accident involving LOC every four days.

At this safety seminar, we will discuss Loss of Control in General Aviation accidents. Presenter Tom Fowler is an experienced flight instructor who has thoroughly researched this critical topic and places heavy emphasis on it during his regular flight instruction at Aspen Flying Club at Centennial Airport. He will discuss the importance of stabilized approaches and proper go-around procedures, and their roles in LOC accidents. Pilots of all skill levels are encouraged to attend.

Directions: Aspen Flying Club is located in the Denver Jet Center East building at Centennial Airport KAPA. Follow Peoria Rd until it meets the control tower, then take the 2nd exit off the roundabout onto eastbound E Control Tower Rd. Aspen Flying Club is on the right side, with ample parking in front of the building.

A message from the National FAASafety Team Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.
